## EQUIPMENT INSPECTION

MACHINE	SERIAL NUMBER	INSPECTION GRADE
Injection Molder	SGMM-12345	FAIL

INSPECTION SUMMARY
During the inspection of the injection molder, an issue was detected with a specific part of the machine. The nozzle was found to be clogged, resulting in the production of defective parts. To address the problem, the technician thoroughly examined the nozzle and discovered residual material obstructing its flow. Swiftly taking action, the technician meticulously cleaned the nozzle, restoring its functionality and allowing the machine to resume production of high-quality parts. In order to prevent future occurrences of such failures, the technician emphasized the importance of regular maintenance for the machine. Overall, the timely identification and resolution of the issue ensured that production could continue without further delays or compromised output.

Injection Unit	Defective	X
Mold Clamping Unit	Good	✓
Hydraulic System	Good	✓
Temperature Control System	Good	✓
Ejector System	Good	✓
Lubrication System	Good	✓
Safety Devices	Good	✓
Control Software	Good	✓
