## EQUIPMENT INSPECTION

MACHINE	SERIAL NUMBER	INSPECTION GRADE
Injection Molder	SGMM-12345	FAIL

### INSPECTION SUMMARY

During the inspection of the injection molder, it was observed that one of the parts on the machine was failing. Specifically, the nozzle seemed to be clogged, which was causing the production of defective parts. The technician examined the nozzle and found that it had some residual material stuck inside. They cleaned the nozzle thoroughly, and the machine resumed production of good quality parts. The technician recommended regular maintenance of the machine to prevent such failures in the future. Overall, prompt action was taken to identify and rectify the issue, ensuring that production could resume without further delays.

Injection Unit	Defective	X
Mold Clamping Unit	Good	✓
Hydraulic System	Good	✓
Temperature Control System	Good	✓
Ejector System	Good	✓
Lubrication System	Good	✓
Safety Devices	Good	✓
Control Software	Good	✓
