EQUIPMENT INSPECTION

| MACHINE | SERIAL NUMBER | INSPECTION GRADE |
|------------------|---------------|------------------|
| Injection Molder | SGMM-12345 | FAIL |

| INSPECTION SUMMARY |
|---|
| During the inspection of the injection molder, a notable issue came to light concerning one specific part of the machine. The nozzle was found to be clogged, leading to the production of defective parts. A thorough examination was conducted and discovered residual material obstructing the nozzle's proper function. Responding promptly, the nozzle was, effectively restoring its optimal performance. Consequently, the machine was able to resume production, producing high-quality parts once again. To prevent similar occurrences in the future, regular maintenance is strongly. Overall, the identification and swift resolution of the issue ensured uninterrupted production without any further delays or compromised output. |
